

# ETP

## ENERGY TECHNOPLUS

### REMOVABLE INSULATIONS

EASE OF HANDLING

HIGH EFFICIENCY

FAST RETURN

#### REFERENCES:

## Proposed fields of application:

- FITTINGS OF CALORIC SYSTEMS
- HEAT EXCHANGERS , PASTEURIZING EQUIPMENT
- AUTOCLAVES, DESTILLATION TOWERS
- DRYING-HEAT TREATING EQUIPMENT
- BOILERS AND FURNANCES
- PLASTIC INJECTION MOLDING MACHINES, EXTRUDERS

The use of the ETP insulation covers is especially recommended in places, where the maintenance, repair and cleaning works require the removal of the insulation.

The insulation covers are produced in the whole dimension scale of steam and hot water valves, but we can produce insulations for machine elements of any size and form. The design of ETP insulations make possible fast mounting and dismantling, their handling does not require any special skill.

The insulations can be used for both outdoor and indoor insulation works, as the cover is water resistant and can resist UV radiation. Some of our product can be used up to 1000°C surfaces.

All of our raw materials are fireproof. The efficiency of the ETP insulations is between 85-90%, which the selected filling insulation thickness and density provides to the given project. Based on the users experiences the life expectancy is more than 10 years.
